Art Unit: 1636

DETAILED ACTION

Claims 1-24 are pending in the application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 14-19, drawn to a PKDL2 gene targeting construct, a method of making said construct, a cell comprising a disruption of a PKDL2 gene, a non-human transgenic animal comprising a disruption of a PKDL2 gene, and a method of making said transgenic mouse, classified in class 536, subclass 23.1, class 435, 325, class 800, subclass 18.
- II. Claims 10, 20 and 21, drawn to a method of identifying agents that modulates the expression or function or a phenotype associated with the disruption of a PKDL2 gene by using a transgenic non-human animal comprising a disruption of a PKDL2 gene, classified in class 800, subclass 3.
- III. Claims 11 and 12, drawn to a method of identifying agents that modulates the expression or function or a phenotype associated with the disruption of a PKDL2 gene by using a cell comprising a disruption of a PTP36 gene, classified in class 435, subclass 325.
- IV. Claim 13, drawn to an agent that modulates the expression or function of aPKDL2 gene, unclassifiable.
- V. Claim 22, drawn to an agent that ameliorates a phenotype associated with a disruption of a PKDL2 gene, unclassifiable.

Application/Control Number: 10/005,211

Art Unit: 1636

VI. Claim 23, drawn to an agonist or antagonist of PKDL2, classified in class 504, subclass 103.

VII. Claim 24, drawn to an electronic database comprising the phenotypic data of aPKDL2 knockout mouse, classified in class 707, subclass 100.

The inventions are distinct, each from the other for following reasons.

The inventions of Groups I and IV-VII are patentably distinct because the inventions are drawn to materially distinct compositions that are not related. The transgenic animal, the agents, the agonist and the database are biologically, chemically and functionally distinct from each other. Therefore, the inventions of Groups I and IV-VII are patentably distinct.

The inventions of Groups II and III are patentably distinct because they are drawn to methods that require different starting materials and modes of operation. Each method has a distinct purpose and further comprising distinct method steps. Therefore, the inventions of Groups II and II are patentably distinct.

The inventions of Groups I, IV-VII are patentably distinct from the inventions of Groups II and III because the inventions are drawn to compositions and method that are not directly related. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different function, and different effects each from the other. The products of Groups I, VI-VII can be used in methods that require different technical considerations and materially different reagents from the method of Groups II and III. The product of Groups IV and V can be made by methods other than the methods of Groups II and III. For example, the

Application/Control Number: 10/005,211

Art Unit: 1636

transgenic animals of Group I may be used to produce antibodies. Further, the method of Group III may be practiced with a wild type animal, and the agent of Groups IV and V can be identified by using a wild type animal. Therefore, the inventions of Groups I, VI-VII are patentably distinct from the inventions of Groups II and III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. A search of the subject matter of one invention would not be co-extensive with a search of the other invention, and therefore the search would be burdensome. Each invention is capable of supporting a separate patent.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Celine X Qian whose telephone number is 703-306-0283. The examiner can normally be reached on 9:00-5:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Remy Yucel Ph.D. can be reached on 703-305-1998. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-3014 for regular communications and 703-305-3014 for After Final communications.

Art Unit: 1636

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
